

# Habitat Protection and Restoration

Conservation Connection 2025

## 3 ways to Conserve Wildlife

1. Habitat Restoration - reintroducing native species
2. Promoting sustainable land use by correcting environmental disturbances
3. Raising awareness and advocacy

## Objectives

- Safeguard habitats to protect diverse species (Biodiversity)
- Enhance carbon sequestration and reduce greenhouse gas emissions (Climate)
- Rehabilitate ecosystems to ensure clean and sustainable water sources (Water Quality Improvement)
- Provide jobs, reduce poverty, and support sustainable livelihoods; strengthening harmony between people and nature (Community)

Healthy ecosystems support diverse organisms, ensuring ecological stability and resilience to environmental changes.

Clean water ecosystems support agriculture, drinking water supplies, and marine life, addressing critical global water challenges.

Reforestation and ecosystem restoration absorb CO<sub>2</sub>, helping combat climate change while mitigating its effects like extreme weather.

Engaging local communities in restoration projects fosters economic growth and environmental stewardship, creating a balance

## Benefits

The **World Wildlife Fund (WWF)**, collaborates with communities around the world to conserve wildlife and help nature to thrive. They target to protect 30% of land water/ocean and restore degradation by 2030. These communities are made up off:

6 Continents  
350 Cities/Countries  
1 Million members

## Global Initiatives on our Islands

1. [Bermuda Seagrass Project](#)
2. [Ocean Alliance project \(Oahu\)](#)
3. [Kuleana Coral Restoration \(Hawai'i\)](#)

Visit the links for more information and how to get involved!

Protecting and Restoring habitats while managing invasive species, creates a thriving environment for wildlife ensuring long term ecosystem stability.
